

Order in One Click (Quick order) module. Installation guide.

For PrestaShop 1.6, 1.7

Installation.

Install the module in the usual way, in the menu item "Modules & Services -> Upload a Module (or Add a new Module if you use PrestaShop 1.7)"

Only for PrestaShop 1.7

Adding hooks to the template.

By default, the "Order in One Click" module button is shown only on the shopping-cart page. In order for the button to be displayed on the product page and quick view page, you need to add two hooks to the template of your store.

It's easy:

1. Open the file «themes/{your_theme}/templates/catalog/product.tpl»

Find strings

```
{block name='product_add_to_cart'}  
  {include file='catalog/_partials/product-add-to-cart.tpl'}  
{/block}
```

Add after them

```
{hook h='displayOOCProductButton'}
```

2. Open the file «themes/{your_theme}/templates/catalog/_partials/quickview.tpl»

Find strings

```
{block name='product_add_to_cart'}  
  {include file='catalog/_partials/product-add-to-cart.tpl'}  
{/block}
```

Add after them

```
{hook h='displayOOCQuickViewButton'}
```

3. Go to back office, select menu item
"Advanced parameters -> Performance" and click on the "Clear cache" button

Now, the "One click order" button is displayed both on the product page and on the quick view page. You can enable / disable the display of the button in the module settings page.
